INTERNATIONAL JOURNAL OF QUANTUM CHEMISTRY, VOL. 52, 1375–1380 (1994)

# Subject Index to Volumes 51 and 52

*Please note that A refers to Volume 51 and B refers to Volume 52.*

1,3-dimethyluracil, dimer form, 141A
1D alternant Hückel–Hubbard system, 173A

Ab initio, 27A, 161A, 307A, 313A, 1B, 97B, 191B, 491B, 1329B,
Ab initio band-structure calculations, 1067B
Ab initio calculations, 117B, 199B
Ab initio cluster model approach, 281B
Ab initio computed hyperfine structures (hfs), 879B
Ab initio crystal orbital method, 395B
Ab initio Hartree–Fock method, 1229B
Ab initio molecular orbital theory, 9B
Ab initio transition states, 161A
Activation hardness, 99A
Adiabatic ionization potentials, 1081B
Adiabatic reactions, 1219B
Ahlrichs/Driessler procedure, 3A
Alcohol dehydrogenase, 1229B
Alkali metal amides, 313A
Alkali metal hydroxides, 313A
Alkaline metals, 321B
All-*trans* conjugated polyenes, 127B
Alternant 1D $\pi$-system, 173A
AM1 semiempirical method, 141A
AM1 semiempirical molecular orbital method, 1317B
Aperiodic polymers, 267B, 309B
Atom–surface scattering, 515B
Atomic collisions, 499A
Atomic regions, 705B
Atomic spectroscopy, 425A
Atomic valencies, 295B

B-spline approximation, 1267B
B-spline basis, 507B
BN microclusters, 199B
Band gap, 173A, 353B
Band-structure calculations, 987B
Basis set, 27A, 59B
Basis sets, 225A, 397A, 695B
Binding energies (BE), 973B
Binding energy, 321B
Bond-breaking–bond-forming (BB–BF) process, 1153B
Bond midpoint properties, 247B
Bond relaxation, 329B
Bond stretching, 153B
Born couplings, 809B
Born–Oppenheimer approximation, 153B
Brueckner coupled-cluster (CC) theory, 87A
Bulk modulus, 987B
Butadiene dimerization, 1039B

CASSCF state-averaged calculations, 1329B
Cationic boron clusters, 1081B
CFHH–GLF method, 285A
Chaos, 515B
Charge-conjugation symmetry, 329B
Charge densities, 329B
Charge density, 987B
Charge-transfer excited states, 281B
Chemical bonding, 711B
Chemical kinetics, 837B
Chemical potential, 569A
Chemisorption of hydrogen, 1067B
Chiral modifier, 191B
C—H stretching frequencies, 109B
CI wave functions, 1339B
Classical chaos, 515B
Clebsch–Gordan coefficients, 1301B
CNDO band theory approximation, 295B
Cohesive energy, 987B
Complex eigenvalue Schrödinger equation (CESE), 529A
Composite natural orbitals (CNOs), 27A
Compounds, 651B
Configuration interaction (CI), 527B, 549B, 947B
Configuration interaction (CI) calculations, 27A
Configuration interaction (CI) wave functions, 225A, 1145B
Conjugation length effect, 89B
Constrained Hartree–Fock (HF) theory, 575B
Continuum wave functions, 507B
Contracted Schrödinger equation (CSchE), 369A

© 1994 John Wiley & Sons, Inc.

Coordination chemistry, 1229B
Coordination compounds, 867B
Core photoionization satellites, 135B
Correct density matrix, 1273B
Correlated molecular orbital (MO) wave functions, 1127B
Correlation energy, 265A, 609B, 799B, 947B
Correlation energy functionals, 1027B , 705B
Correlation functions, 457B
Correlation pairing, 413B
Coulomb-hole–Hartree–Fock (CHF) functional, 849B
Coupled-cluster (CC) methods, 211B
Coupled-cluster (CC) theory, 87A
Cryolite melts, 927B
CRYSTAL, 365B
Crystalline oxides, 295B
Crystallization, 329A
Cumulants, 113A
Curve crossings, 49B

Density functional approach, 267B
Density functional calculations, 465B
Density functional (DF) methods, 935B, 947B
Density functional (DF) pseudopotential calculation, 1113B
Density functional formalism (DFF), 1067B
Density functional theory (DFT), 79A, 695B, 731B, 767B, 799B, 809B, 817B, 837B, 867B, 919B, 963B, 1017B, 1039B
Density of states projections, 365B
Dependence of $10Dq$, 829B
Diatomics, 49B
Diffusion-controlled adsorption process, 357A
Diffusion-limited aggregation (DLA), 339B
Dirichlet problem, 57A
Disordered grown systems, 375B
Dissociative chemisorption, 117B
Distributed multipole schemes, 17B
DNA sequences, 457B
Dynamical correlation energy, 849B
Dynamical polarizabilities, 353B

Eigenfunctions, 57A
Eikonal approximation, 499A
Electric dipole polarizabilities, 201A
Electric field mapping, 335A
Electric properties, 9B
Electrochemical systems, 357A
Electrode potential, 629B
Electrodeposition, 375B
Electron correlation effects, 395B, 413B
Electron crystallization, 329A
Electron density, 79A
Electron density maps, 365B
Electron density theory, 247B
Electron–electron interactions, 329B
Electron transfer, 479B
Electronic charge cloud, 809B
Electronic charge density, 919B
Electronic current density, 809B
Electronic density maps, 141A
Electronic ground state, 281B
Electronic matrix elements, 479B
Electronic rearrangement, 499A
Electrostatic potential, 335A
Elongation method, 267B, 309B
Enantioselective hydrogenation, 191B
Energy barriers, 695B
Energy functional, 817B
Energy positioning, 575B
Entropy, 425B
Equilibrium lattice parameter, 987B
Even linear polyenes, 99A
Even-numbered monocycles, 181A
Exchange-correlation potential, 465B
Exchange energy, 799B
Excitation energies, 113A
Excitation spectra, 549B
Excited-state, 657B
Excited states, 529A
Extended basis set, 27A
Extended basis sets, 211B
Extended Hückel method, 309B
Extended Rayleigh–Ritz method, 1267B
Extended systems, 539A
Extended Thomas–Fermi energy density functional, 767B

Feynman path integral method, 265A
Field–oscillator coupling, 293A
Finite element method, 357A
Finite supercell calculation, 1273B , 1287B
Flux–Flux correlation function, 465A
Fourier grid Hamiltonian method, 293A
Fractal geometry, 375B
Frost–Musulin diagrams, 181A
Full configuration interaction (FCI) calculations, for closed-shell cyclic polyenes, 13A
Full configuration interaction (FCI) Hamiltonian matrix, 487A
Full configuration-interaction (FCI) method, 369A
Fullerene model systems, 135B
Functional derivative $\delta E/\delta\rho$, 569A

Gauss–Legendre, 407A
Gaussians, 447A

Geminals, 563B
General-valence-bond perfect pairing (GVB-PP) SCF calculation, 1027B
Generalized Langevin equation (GLE), 1219B, 519A
Generator coordinate approximation (GCA), 49B
Gradient-corrected potentials, 711B
Gradient corrections (GC), 957B, 973B
Gradient method to calculate nonadiabatic NO expansions, 3A
Ground state, 135A, 1329B
Ground-state, 657B
Ground-state correlation energy, 225A
Ground-state density, 201A
Ground-state electronic properties, 919B
Ground-state energy, 113A
Ground-state wave function, 3A

Hamiltonian, 439A
Hamiltonians, 487A, 59B
Hartmann system, 1301B
Hartree–Fock, 79A
Hartree–Fock densities, 201A
Hartree–Fock (HF), 395B
Hartree–Fock (HF) ab initio electronic energy calculations, 935B
Hartree–Fock (HF) binding energy, 1349B
Hartree–Fock (HF) calculations, 837B
Hartree–Fock (HF) densities, 1027B
Hartree–Fock method, 177B
Hartree–Fock–Roothaam (HFR) equation, 575B
Hartree–Fock self-consistent field (HF-SCF) theory, 1287B
Hartree–Fock solutions, 947B
Hartree–Fock-type single-determinant wave function, 849B
Heisenberg–Dirac–VanVleck exchange spin Hamiltonian, 903B
Helium atom, 135A
Heterosubstituted hydrocarbons, 109B
HF elimination, 161A
High-directional Monte Carlo (HDMC) simulations, 241A
High-energy electron scattering, 1145B
Hilbert space structure, 123A
Hole self-trapping, 1177B
Homonuclear molecular binding, 247B
Hopping conductivities, 491B
Hubbard model, 173A
Human *ras* oncogene proteins, 241A
Husimi function, 555A
Hydrocarbons, 109B
Hydrogen-bonded complexes, 465B
Hydrogen-bonded systems, 957B
Hydrogen bonding, 395B
Hydrogenated silicon clusters, 1113B
Hydrolyzing esterase enzymes, 35A
Hyperpolarizabilities, 87A
Hyperspherical formalism, 285A

INDO/SDCI method, 673B
Infinite system density matrix, 1273B
Infinite systems, 395B
Integrals of exchange, 799B
Interbasis expansions, 1301B
Intermediate neglect of differential overlap/single configuration interaction (INDO/SCI) sum-over-states (SOS) approach, 89B
Intramolecular hydrogen bonding, 105A
Intrinsic reaction coordinate (IRC) method, 731B
Ionic solids, 281B
Ionization potential (IP), 993B
Iso-energy cutoff scheme, 147B
Isotropic hyperfine coupling constants (hfcc), 97B

Jahn–Teller systems, 809B

Kepler–Coulomb system, 1301B
Kinetic energy functional (KEF), 1349B
Kinetic energy operator, 1199B
Kinetic-energy pressure, 575B
Kohn–Sham density functional approach, 711B
Kohn–Sham density functional (DF) approach, 973B
Kohn–Sham electronic system, 569A
Kohn–Sham equation, 267B
Kohn–Sham equations, 817B
Kramers rate equations, 1219B
Kratzer potential variable, 165B

Laplace transformation technique, 357A
Large clusters, 319A
Large molecules, 59B
Lattice constants, 919B
Least-squares approach, 507B
Lennard-Jones potential, 407A
Linear combination Gaussian-type orbitals–local spin density (LCGTO-LSD), 1011B
Linear combination of Gaussian-type orbitals–nonlocal spin density (LCGTO-NLSD), 1011B
Linear combinations of Gaussian-type orbitals–density functional theory (LCGTO-DFT), 879B
Linear polyenes, 575B

Liquid entropy, 425B
Lithium atom, 211A
Local correlation functional weighted spin-density approximation (WSDA), 993B
Local density approximation (LDA), 1113B , 711B, 731B, 817B, 957B
Local density functional approach, 79A
Local density functional (LDF) calculations, 927B
Local density (LDA), 919B
Local spin-density approximation (LSDA), 993B
Local spin density (LSD) formalism, 1081B
Localized Hartree–Fock molecular orbitals (LMOs), 563B
Long-range correlations, 457B
Low-dimensional systems, 413B
Löwdin α-function method, 417A
Low-gap polymers, 353
Lower bounds, 211A

Magnetic fields, 135A
Many-body effects, 527B
Many-body perturbation theory (MBPT), 127B
Many-body Schrödinger equation, 285A
Many-body theory, 389A
Maple™ program language, 593B
Mass conservation law, 301B
Maximum bond order hybrid orbital (MBOHO), 109B
Medium structures, 519
Metal clusters, 767B
Metal-encapsulated compound, 657B
Metal–ligand distance, 829B
Metal surfaces, 617B
Microclusters, 199B
Minimization of energy functional, 817B
Minimum-energy conformations, 177B
Möbius–Zimmerman diagrams, 181A
Molecular charge density models, 17B
Molecular dynamics (MD), 407A, 927B
Molecular dynamics (MD) simulations, 437B
Molecular-orbital theory, 609B
Molecular orbitals (MOs), 127B
Molecular shapes, 255A
Molecular spectra, 9B
Molecular spectroscopy, 425A
Møller–Plesset perturbation theory, 117B, 395B
Monomers, 437B
Monopilocarpic acid diesters, 35A
MOPAC quantum chemistry program, 1287B
MP2 method, 1051B , 177B, 353
MS-LSD method, 319A
MS-Xα calculations, 1051B , 177B, 353
MT method, 321B
Muffin-tin approximation, 319A
Multicenter formulations, 507B
Multicenter integrals, 345A
Multicenter molecular integrals, 417A
Multiconfiguration time-dependent Hartree–Fock (MC TDHF) approximation, 307A
Multielectron formulations, 507B
Multifractal, 375B
Multifractal analysis, 539A
Multifractal scaling analysis, 339B
Multiminima potentials, 1267B
Multiparticle correlation expansion, 425B

Natural atomic orbitals (NAOs), 1127B
Negative ions, 201A
Nonadiabatic NO expansions, 3A
Nonadiabatic situation, 809B
Nonequilibrium growth, 375B
Nonlinear eigenvalue problem, 1199B
Nonlinear sequence transformations, 345A
Nonlinear third-order optical susceptibility, 673B
Nonlocal corrections, 695B, 963B
Nonlocal exchange-correlation potential, 389A
Nonlocal gradient corrections, 879B
Nonmagnetic electron crystal, 329A
Nonstationary states, 529A
Nuclear spin–spin coupling, 153B

Odd-numbered monocycles, 181A
Of band-structure calculations, 987B
Oligomers, 39B
One-center expansion methods, 345A
One-dimensional diatomic systems, 329B
One-dimensional Eckart barrier, 465A
One-dimensional Schrödinger equation, 1267B
One-electron effective Hamiltonians, 59B
Open-shell configurations, 867B
Open-shell systems, 947B
Orbitals, 397A
Organometallic molecules, 71B
Oscillators, 293A
Overlap integrals, 1249B

Paramagnetic clusters, 903B
Pariser–Parr–Pople (PPP) approximation, 13A
Path integral, 609B
Path integral approach, 265A
Peierls distortion, 329B
Perdew's and Becke's nonlocal (NL) corrections, 731B
Phase-space representations, 123A

Photochemical reactions, 71B
Photoelectron spectra, 527B
Photoenolization, 1317B
Photoionization spectra, 549B
Photoluminescence (PL), 1113B
Pilocarpine double prodrugs, 35A
Poincaré surface of section, 555A
Polarizabilities, 177B, 353B, 1051B
Polarization, 365B
Polycyclic aromatic hydrocarbons (PAHs), 681B
Polyelectron population analysis, 1127B
Polymer melts, 437B
Poschl teller potential, 165B
Post-Hartree–Fock (HF) methods, 963B
Potential energy curves, 307A
Potential energy surface (PES), 1081B
Potential energy surfaces (PES), 935B
Potential energy surface topography, 227B
Potential fitted atomic charges, 17B
Potential of mean force, 147B
Prolate spheroidal coordinates, 1301B
Proteins, 241A, 479B, 491B
Proton affinities, 313A
Protonation, 105A
Protonation-induced conformational flipping, 105A
Pseudopotentials, 1B, 919B
Pseudotetrahedral metal–nitrosyl complexes, 1039B

Quantum mechanics, 123A
Quantum phase-space densities, 555A
Quartic oscillator, 555A
Quasi-degenerate perturbation theory (QDPT), 549B
Quasi-energy derivative (QED) method, 87A
Random-phase approximation, 265A
Random walk theory, 491B
Reactants, 519
Reactive etching, 117B
Recursive residue method, 479B
Renormalized-perturbation-expansion approach, 479B
Resonance, 575B
Runge–Kutta (GLRK) methods, 407A
Runge–Kutta (RK) integration schemes, 407A

$\sigma$ Radicals, 963B
Scaling–Nesting Similarity Measures, 255A
SCCEH calculations, 1051B
SCF interaction energy, 1051B , 177B, 353
SCF wave functions, 1399B
Schrödinger equation, 1301B
Schrödinger operator, 57A
Screened-Coulomb potentials, 57A
Second-order Møller–Plesset (MP) correlation correction, 199B
Self-consistent calculations, 987B
Self-consistent (SC) iterative process, 369A
Self-consistent (SC) screening, 389A
Self-consistent-field (SCF) local density theory, 657B
Self-consistent field (SCF) wave functions, 1145B
Self-dual phase-space representation, 123A
Semiclassical density functional approach, 1349B
Semiclassical quantification, 609B
Semiempirical method AM1, 681B
Semiempirical quantum mechanic method AM1, 651B
Semiempirical transition states, 161A
Semi-ionic crystals, 1177B
Semisimilarity, 255A
Separated atoms or ions (SAL), 187A
Shake-up satellites, 135B
Simple floppy molecules, 227B
Slater-type orbitals (STOs), 225A, 397A, 417A, 1249B
Soft-body model, 439A
Solution chemical reactions, 519
SOS (sum-over-states) formalism, 39B
Spherulites, 301B
Spin-adapted reduced Hamiltonian (SRH) matrices, 487A
Standard reduction potentials, 629B
Statistical theory of spectra, 425A
Strictly localized geminals (SLOs), 563B
Structure–Activity relationship, 335A
Strutinsky's self-consistent averaging procedure, 1349B
Substrate, 191B
Sum-over-states, 673B
Symmetry breaking, 947B
Synchrotron radiation, 1339B
